

Engineers make many things.
You use them every day.
From cell phones to your city streets,
They make it safe to play.

Computer engineers make things
Like games and cool robots.

They even make the timer
On your mother's coffee pot.

Civil engineers design
The roads around your town.

They make sure bridges are made well
So they won't come tumbling down.

Industrial engineers
Make factories run well.
They keep the building safe and busy
To make the products they sell.
